

In recognition of the principles of sustainable development and adopting a specific strategy for the protection of the environment, **SKYPLAST SA** is committed to:

- complying its activities with the applicable National and European legislation,
- the continuous improvement of its environmental performance and its contribution to sustainable development,
- the prevention of pollution, through best practices that reduce the environmental impacts of the company's operations.

The main principles on which the Environmental Management System is based are:

- the sustainable management of natural resources,
- adopting preventive measures to avoid any kind of pollution,
- the integrated waste management,
- the implementation of environmental standards in the purchase of supplies,
- the protection and safety of workers,
- the adoption of good practices and the awareness of staff on environmental issues, as well the familiarization of staff with the implementation of the Environmental Management System,
- cooperation with non-governmental organizations to develop and implement plastic pollution preventive actions.

The Environmental Policy that the company has established must be respected and adopted by all interested parties (employees, partners, supplies, visitors and any other third parties).

The Management System is a tool for the development, improvement and further recognition of the company in the market in which it operates. Top Management is committed to providing all the necessary resources and means for the effective implementation and improvement of the System.

This Environmental Policy applies to all the company's activities and is an integral part of its policy.
